-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

1. First Action on the Merits. Claims 1-20 are pending.

Drawings

2. The drawings, as originally filed, are acceptable as formal.

Specification

3. The disclosure is objected to because of the following informalities: On page 4, lines 18-19, a pair of 3rd transmission members are called for, but the drawings (see figure 4, for example) only show and identify only one..

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-15, and 18-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Tsai (5,735,727).

Tsai shows the claimed invention where multiple transmission members (see the gears in figure 1 which transmit power) which are mounted on posts (e.g. 21 and 31)

Art Unit: 3682

which are an integral part of a housing (figure 1 shows a housing which contains the drive train)); the housing has a complementary side (1) which connects to the first side through posts (see the six posts on the first housing side which are used to secure the two housing halves together); the geartrain or transmission members are driven by an electric motor (11); a cam (221) pushes a slide board (23) which moves in a reciprocal manner along guide (13).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 16-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsai (5,735,727) in view of Saraceni (4,847,739).

Tsai shows the claimed invention except for the use of a transparent plate.

Saraceni shows a rotating light disk (46) which is rotationally driven by an electric motor (32); light sources (66, 68, 70) are positioned below the rotating light disk so that as the disk rotates, light shines through the disk and creates differing light effects.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the light disk of Saraceni into the invention of Tsai to provide for a great multitude of small, angularly offset reflective surfaces so that a unique, colored, reflected light pattern is projected.
